Between 250,000 and one million people have gone missing in Iraq from decades of conflict and human rights abuse.

Engaged in Iraq since 2005

Since 2008 trained more than 300 individuals

STAGE 1
Identify the learning needs

STAGE 2
Design the training

STAGE 3
Deliver the training

STAGE 4
Evaluate the training

The Training Cycle

Training in Archeology & Anthropology, Data Coordination, and DNA Laboratory Operations
As the only international organization tasked exclusively to work on the issue of missing persons, ICMP maintains a standing capacity in DNA-led human identification. ICMP’s Center for Excellence and Learning (CEL) provides training and support to partners from around the world. The CEL enables the transfer of knowledge and skills, strategies and best practice in areas such as DNA-led identification testing, advanced database informatics, excavation of mass and clandestine graves, examination of human remains, chain-of-custody procedures and crime-scene management. In Iraq ICMP is endeavouring to provide access to its Identification Data Management System (iDMS), which is a set of powerful integrated applications that allow governments, families of the missing, technical experts and others to securely store and share information that can help to locate and identify missing persons.
